

EMS Spectron Video Synthesizer

The EMS Colour Video Synthesizer is a completely unique and revolutionary development in video hardware. The Spectron is an instrument capable of creating exciting graphic image on an ordinary television screen. It can be used to process and manipulate images fed to it from a TV camera or VTR, or to create dramatic and evocative abstract images without the need for an external signal source.

The Spectron Video Synthesizer is similar to the now familiar audio synthesizer. It incorporates a number of separate functions which can be selected and combined by the user by means of patch boards on the front face panel. The number of possible combinations is virtually infinite, allowing an unlimited variety of images, colours and patterns to be produced. Two specially-prepared DVDs are presented showcasing the capabilities and functions of the Spectron along with technical information and a rich source of visual references. Along with the many examples of Spectron-generated video graphics are picture galleries, information on Richard Monkhouse (the Spectron's electronics designer and engineer), the article the Moving Art of Video Graphics, and information on video synthesis as an evolutionary phenomenon.

EMS Spectron Video Synthesizer

A selected variety of examples has been chosen to portray the unique capabilities of the Spectron video synthesizer. All examples have been re-mastered and prepared in wide-screen format with additional sound as required.

DISC 1

RM Spectron Demonstrations

Mother Earth by Zorch

Le Entraperçu by Robert Cahen

Lucifer Photophore Quad Display

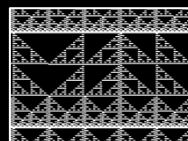

Labyrinthe Fluides with Information Text

Variations Video I – Jacques Guyonnet

Horizontales Couleurs – Robert Cahen

Artmatique – Robert Cahen

Art Electronique

DISC 2

Telex – Twist a St. Tropez

Tangerine Dream Richocet Excerpt

Todd Rundgren – All The Children Sing

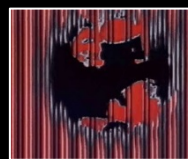

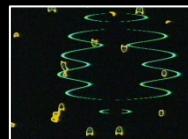

Plastic Bertrand – Ça Plane Pour Moi

Indefinite Objects Quad Display

Sans Soleil Film Spectron Excerpts

EMS Spectron Logic Demonstrations

Indefinite Objects NVC
